Shorelines script font

By ExtremeTech Staff on May 18, 2001 at 00:00 This site can earn affiliate commissions from the links on this page. Terms of use. Think you can improve your site with a blog-ads of personal thoughts or profiles of sites that you find interesting. Scripting News acts as a portal to record sites so you can see how people use technology. It is hosted by Userland, the company that makes web log components, including software that essentially allows you to turn your PC into a web server to allow you to view your log. Here at Creative Bloq, we're big fans of typography and we're always on the lookout for new and exciting typefaces - especially free fonts. So if you need a font for your latest design or just to keep a collection so you're ready, we may be able to help. Every day, we publish Font of the day, where we'll publish the best free, paid policies the web has to offer. Nickainley Script from Seniors StudioKicking out of our police day posts this week is monoline script typeface Nickainley Script. Created by the Seniors Studio team, Nickainley is described as a writing font with a touch of classic and vintage. You can download Nickainley Script for free, both for personal and commercial use, more on Behance.Liked this? Read this! Your computer and many software are equipped with fonts, so it is likely that you already have a lot of fonts at your fingertips. However, if you need a specific font or are looking for something new, the Internet provides a shopping bargain for fonts. Many places sell fonts, but several sites have stood the test of time and have a reputation for providing reliable products. All of these sites also provide a multitude of educational materials and information, a new regular font section and more fonts than you'll ever need. Linotype sells a huge selection of high quality fonts. Explore the Linotype Fonts Library to find the one you need. You can buy simple fonts, a family pack, or take advantage of one of the special offer packs that the site offers regularly. In addition to selling fonts, fonts.com and partner foundries offer a selection of high-quality free policies. Sign up for free to go to the download section. There are many articles, newsletters and question-and-answer content to learn more about fonts and typography. Even if you are not in the market for the new fonts, you will gain a lot of insight in the to use the fonts you already own just by browsing this site. Fonts.com sells policies, but it also offers subscription packages to its policies on average a monthly fee: Web Font subscription: Web designers can choose from five packages (one free) to access 3,000 to 40,000 policies. These are high quality web fonts from Monotype, Linotype, and other vendors. Subscription to the monotype library: The library contains fonts from Monotype, Linotype, ITC, Bitstream and Ascender. More than 9,000 fonts from more than 2,200 font families are currently available and new ones of this type are added as they are introduced. Several subscription packages are available. Check out the website for the best plan for you. At MyFonts, you can search for fonts by name, by designer or foundry, browse by category, check out their Hot New Fonts, and use what may be its best-known feature — WhatTheFont for font identification. With this feature, you download a scan of a font you're trying to match, and the site gives you the name of a corresponding or almost matching font FontShop, the first independent retailer of digital fonts, was acquired by Monotype in 2014. You can search for fonts organized by category, foundry and designer, or you can randomly search the days when you want to make big accidental discoveries. The free font section contains a large selection of free policies. News and interviews and resources provide a lot of information about policies. Thank you for let us know! Tell us why! This image was lost some time after publication, but you can still see it here. Site TypeNow offers a very cool selection of free fonts from your favorite movies, TV shows, musicians, video games, and more. The selection of fonts is actually impressively large, offering over 300 free fonts in all. These fonts could certainly be useful in case you've always wanted to set up a character party, website, newsletter, etc. TypeNow Fonts to TypeNow.net] By Melissa Worcester There are many ways to categorize fonts. Block fonts are a somewhat subjective category of fonts that share certain characteristics. They are easy to read and well suited for signs and short titles. Block fonts have traits of the same thickness. The lines are the main lines and curves that form the shape of the letter. Block fonts almost always have square corners on the edges. This does not mean that there will be no curves. A letter S or O is difficult to do without any curves, although some fonts do. But block fonts are more likely to have lots of straight lines and sharp corners than other fonts. Fonts can be classified as serif or serif-free, meaning they have or do not have serifs, small strokes or lines at the ends of the long main strokes (the text you are reading now is serif-free). If block fonts have serifs, these serifs are most often shaped like squares or rectangles and are known as slab serifs. Many block fonts contain only capital letters. They can also use so-called small This means that letters normally typed in the form of low-cost letters would rather be formed as capital letters, but these letters would be smaller than standard capital letters. Block letters are generally not intended for body text. Instead, these types of bold, square letters are suitable for advertisements, signs and other places where relatively large type is needed. Another use for block letters is to type easy-to-read school material for early readers. In this case, it would be technically considered to be body text, but it be much larger than the normal body text. This tutorial will help you through a technique to develop your own expressive, playful, hand-drawn. You will be guided through the generation of ideas and character design and tips on how to govern space to create balance and harmony of your creations. I used to waste way too many hours trawling through the font lists, desperately trying to find the right one, but with nothing really hitting the place. Eventually, I realized that it might be a good idea if I start reaching my pen and pad to design my own solutions, rather than getting bogged down in these nightmare lists of indecision. Getting acquainted with the ins and outs of the characters, and trying to capture the atmosphere you want to convey with typography is a practical skill set. Yes, it takes practice, but every time you try, you will learn a whole lot of new things. For example, designing your own type really helps you appreciate how subtle differences can have a great overall effect and how bad type choices can really tarnish your concept. This tutorial will help you get started with making your own fonts. Over the next three pages, I will share with you a technique and process that I have developed over the years. First of all, you will need to put your materials in order. Nothing too chic: just A3 tracking paper, a 2H pencil, thin coatings, a good rubber, a sharpener, a ruler and masking tape. Let's start.1 StudyBegin fonts by familiarizing yourself with font characters. Open a program like Adobe InDesign or Illustrator and type the alphabet into a few favorites. Find out why you like them, and what inconsistencies and inconsistencies are apparent. Then open your sketchbook and start experimenting loosely with different fonts. Start by drawing a few characters from your favorite list: as you build in confidence, start adding your own. There's no right or wrong at this point, so just play.3 Loose SketchYou should now be confident enough to use a concept to help tie all your sketches together. Here we create the main typography for a fictional tattoo parlor called Books for the Flesh. You can use the Loosesketchreference file.jpg for inspiration.4 Two sheetsThis you're happy with your loose sketch, it's time to start a larger and more focused version. Get two loose sheets of plotting paper and line them up with each other. Use a strip of masking tape to stick them together, folding it on top.5 Draw guides on the bottom sheet, start Mark certain guides so you can place your characters accurately. Divide the page across its entire width and length to find the central point of the paper. From this point, draw lines across the entire width in 4 cm increments, as shown here.6 Simple rulesOur first word has six characters, which we will also space on top. However, we need to look at a few rules. For example, the o and n should be wider than the d, you and s. Aim about 1 cm for the width of the stems of u in the picture).7 Sketch characters This step requires a bit of trial and error. Start by loosely sketching your characters, paying attention to spacing across the entire width of the page and between each character, as well as their height. Don't try to be exact: just get an idea of the drawing and spacing.8 Introduce the CoherenceNext, make some slight changes to some of the characters to introduce consistency. Note the o here, which now has vertical stress in the center. Study your characters, checking each to see where consistency can be incorporated.9 Draw oOnce you're happy with how your first word works, it's time to move on to the next one. In our example, it's for. I started by drawing the central o smack in the middle of my page, which fills a space that is about 2.5x2.5 cm in size. I then continued to space the f and r also on each side. Note that you will need to consider the spurs on the o and the serifs on the r when you do this.10 Tie a ribbonTime to add some decoration. Place two stars evenly from the f and r, then start tackling a ribbon shape. Give the for a little breathing space and make sure you keep the width and height equal in the four sections: the front, the wrap and the ends.11 Flesh it outNow move on to Chair. Measure the width of the books, adding vertical guides aligned to the P stem and the end of s to use as starting and end points. Then create a baseline by drawing a 1 cm guide above the lowest guide already in place.12 Strike a balanceBegin sketching Chair, trying to find a balance between each letter shape. Most of these characters (each 5.5 cm wide) are made of the same parts. The stems are 1.5 cm wide with a line set 5 mm to the left. I've scored more consistencys to consider, too.13 Describe a curveThe letter s will be the trickiest - with the other characters being so straight, it will come out like a sore thumb, throwing out the balance of the word. Keep the s curve at 1.5 cm in the center, so it matches the stems in the rest of the characters.14 Finesse itOnce you're happy, it's time to use the top sheet of plotting paper that you attached earlier to really add finesse to your drawing. That should be the fun part. Remember that you can just replace the paper if you need to start over because you think you can do better.15 Ink upWhen you finish the top sheet, it's time to use it as a model for inking a final version. Remove the bottom sheet of tracing paper and place a fresh new sheet on top, sticking it down with Masking. Start plotting your outlines with a pen.16 Add effectsWith the contours ready, we'll fill them out. Instead of making them solid blacks, you may want to try some effects. I've experimented with creating the illusion of light with stippling, or doing races that fade as they pass through the light.17 ExperimentDon't be afraid to experiment: you can easily replace the top sheet, so you don't have to start starting from scratch. I messed up 'Flesh', making the lines too thick and creating a dubious H, so I started again on a new top sheet. When you're done, it's time to scan in.18 Open filesScan to high res and open the files in Photoshop. If, like me, you only have an A4 scanner, sew the two pieces together and select level adjustments. Change the cursors so that the blacks become darker and the whites become lighter, creating more contrast.19 Photoshop magicNow choose Select 'Colour Range'. Click on the highlighted area and press OK. Then you have to create a new layer, keeping the marquee selection around the object. Hit Shift Delete. Select a color you like and tap Back. You now have a free item that you can use as you see fit. For more information on type terms and tips, check out What is Typography? and the best free fonts on our sister site Creative Bloq.
